Explanation:

If I were given chance to have a dream Laptop, It would be the "MacBook Pro with VS1 Diamond Encrusted Apple Logo". Because, in the future I want myself to experience to have something that would represent my success in terms of appliances/devices so that I get a chance to treat myself something fancy and luxurious at least once in my life. I chose this because it consists of "World-Class Customizations" where its customization includes actual jewelries in which it can affect its durability and temperature as this products can be customized as Pure Gold and Platinum because of their physical properties. Not only that, I would want something I can utilized for my everyday life and shines the brightness on a room or area, where I can fulfill my specific tasks and assignments. I didn't chose this because of its luxurious side only, it comes with the specifications as well. The current version of this product has 24/58 Gb Memory and 512Gb/1TB Storage in which I can also play any games I wanted to play that I wasn't able to today as some of them requires high specifications for it to be able to run properly. Specially, it would give me an advantage on FPS (Frame per second) games as it will give me a better gameplay and experience, to be specific higher Hz, less lag or lesser experience of frame dropping that would affect my performance. Because, what I use nowadays or for my everyday life doesn't have that much big specifications. Therefore, I want these overall for my own personal use and its lifespan where it would last longer based on the products description the price may be a pain in a pocket but this product is only a dream, But in order for me to acquire it, I must work hard, earn experiences, knowledge, and certificates to boost myself as a Computer Engineering Student so that I would be able to earn a reasonable salary based off my hardships.
